PROFESSIONAL SUMMARY

AI Developer with 1+ years of hands-on commercial experience building and deploying LLM-powered applications, workflow automation systems, and full-stack platforms. Specializes in LLM Integration, Data Ingestion pipelines, n8n orchestration, and FastAPI and Node.js backends, delivered through CI/CD Pipelines. Every project listed is built end to end and publicly demonstrable.

TECHNICAL SKILLS

AI & Automation: Generative AI (LLMs), LLM Integration, LangChain, n8n Workflow Automation, Data Ingestion Pipelines, PyTorch (.pth weights modeling), NumPy, Pandas, Matplotlib, Seaborn

Languages: Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Backend & APIs: FastAPI, Node.js, Express.js, RESTful APIs, WebSockets (Socket.io), JWT Authentication, Asynchronous Processing, Microservices Architecture

Frontend: React.js, Next.js, React Native, Redux Toolkit, Tailwind CSS

Databases: MongoDB, MySQL, PostgreSQL

DevOps & Cloud: AWS, Docker, Git/GitHub, CI/CD Pipelines, Vercel, Netlify

AI-Assisted Development: Cursor, Claude Code, Bolt.new, Lovable, v0, Google AI Studio

PROFESSIONAL EXPERIENCE

AI Developer | Independent Practice (Self-Employed) | Remote | 2025 – Present

- Architected an Autonomous Blog Generation and Publishing SaaS using a multi-tier, Microservices-style backend built on n8n webhooks and Node.js, with Asynchronous Processing and .env-based secret isolation to keep credentials out of source control.
- Engineered an AI Resume Analyzer and ATS Scoring System that extracts text from PDFs, maps keywords, and scores candidates, using Pandas and Python data-cleaning pipelines served through a FastAPI backend with a React frontend.
- Developed Nexora AI Chatbot, a low-latency conversational interface with custom Data Ingestion pipelines that retrieve business context for LLM Integration and context-aware responses.
- Built a production-ready MERN e-commerce platform with CRUD APIs, Redux Toolkit state management, and custom JWT authentication with Token Isolation and protected routing.
- Deployed applications through Git-based CI/CD Pipelines on Vercel and Netlify, enabling repeatable releases across frontend and backend services.
- Applied programmatic SEO keyword targeting across low-difficulty (KD) clusters, ranking personal developer assets on Google Page #1.
- Modeled throughput, storage, and capacity requirements for large-scale system designs (Facebook Messenger, Instagram, TinyURL) to inform database, caching, and service-partitioning decisions.

KEY PROJECTS

Autonomous Blog Generate & Publish SaaS | n8n, Node.js, Webhooks, LLMs

AI Resume Analyzer & ATS Scoring System | Python, Pandas, FastAPI, React

Nexora AI Chatbot | LLMs, LangChain, Data Ingestion Pipelines

MERN Full-Stack E-Commerce App | MongoDB, Express.js, React, Node.js, Redux Toolkit, JWT

EDUCATION

Full-Stack & AI Automation Track (96-Class Specialization) | Nexskill | 2025

ICS Computer Science (Intermediate) | 2023 – 2025
